

Call for Papers
Control Engineering Practice
Special Issue on

Aerial Robotics: Applications, open problems and new trends.

Aerial robotics has been an active area of research for several decades. Motivated by the tremendous number of civil and military applications, this area of research has expanded steadily over the years. Despite the significant efforts of many researchers in this field, there are still several theoretical and practical challenges related to the control, estimation, and real time implementation that have yet to be overcome.

Control Engineering Practice invites submissions for a special issue on Aerial Robotics. The special issue is devoted to recent results in this area, especially those that identify pertinent practical and theoretical open problems in this field, as well as efficient implementations in practical applications.

Papers must contain high-quality original contributions and be prepared in accordance with the Control Engineering Practice standards. As CEP is an applications journal, papers with strong industrial relevance are encouraged.

Submitted papers must not have been previously published or be under consideration for publication elsewhere. All papers will be rigorously reviewed.

Papers must be submitted at <http://ees.elsevier.com/conengprac/> and authors should note in the "Comments to the Editor" field that their paper belongs to the "Aerial robotics" special issue. The due date for submissions is April 1, 2009. Authors are encouraged to send a prior notice (by February 1, 2009) to one of the Guest Editors indicating their intention to submit a paper. Authors will be notified of the peer review results by October 1, 2009. Expected publication is March 2010.

For additional information, please contact one of the Guest Editors.
